

Internship Task: Online Store Homepage with Product Categories

Task Name:

Online Store Homepage with Product Categories

Duration:

10 Days

Task Description:

The task is to design and develop a dynamic and responsive online store homepage. The website should feature categorized product listings displayed as cards and include filter functionality for sorting products by categories, price, and ratings. This task will help students improve their web development skills, focusing on UI/UX design, interactivity, and responsive layouts.

Objectives:

- Build a visually appealing and responsive homepage for an online store.
 - Display products as interactive cards grouped into categories.
 - Implement filtering and sorting options for a better user experience.
 - Focus on clean, modern UI/UX design principles.
 - Use GitHub for version control to track progress.
-

Features to Implement:

1. Product Categories:

- Organize products into categories such as Electronics, Fashion, Home Appliances, and Books.
- Add a category menu or tabs for users to navigate through different sections.

2. Product Cards:

- Each card should include:
 - Product image.
 - Name and price.

- Rating (optional).
 - "Add to Cart" button.
 - Highlight product cards on hover with effects like shadow or scale.
 - 3. Filters and Sorting Options:
 - Filters:
 - Category: Filter by product type.
 - Price Range: Slider or predefined price ranges.
 - Ratings: Filter by average ratings (e.g., 4 stars and above).
 - Sorting:
 - By Price (Low to High, High to Low).
 - By Rating (High to Low).
 - 4. Responsive Design:
 - Ensure the homepage adapts well to mobile, tablet, and desktop devices.
 - 5. Optional Enhancements:
 - Add a search bar for quick product lookup.
 - Display featured products or sales in a banner/slider at the top.
-

Technology Stack:

- HTML5
 - CSS3 (including frameworks like Bootstrap or Tailwind CSS for responsiveness)
 - JavaScript (for filters, sorting, and interactivity)
 - Optional Enhancements:
 - Use React.js for a dynamic user experience.
 - Integrate a mock API or JSON file for product data.
-

Interactive Components:

- Filters and sorting options with instant updates (no page reloads).
- Clickable product cards for more details or adding to cart.
- Smooth animations for hover effects and transitions.

Version Control:

- Students must create a repository on GitHub.
- Commit changes regularly (with meaningful commit messages).
- Push the final project code to the GitHub repository.

Presentation:

- Deploy the project using platforms like GitHub Pages, Netlify, or Vercel.
- Prepare a brief presentation/demo (5-10 minutes) explaining:
 - Features of the homepage and user interactions.
 - Technologies used in development.
 - Challenges faced and solutions applied.

Deliverables:

1. A fully functional online store homepage with product categories and filters.
2. Source code pushed to the GitHub repository.
3. Link to the deployed webpage.
4. Documentation (README file) containing:
 - Project Overview.
 - Instructions to run the project.
 - Technologies used.

Task Evaluation Criteria:

1. Design Quality: UI/UX, responsiveness, and overall appearance. (25%)
 2. Functionality: Product cards, categories, filters, and sorting. (25%)
 3. Code Quality: Clean, readable, and well-structured code. (20%)
 4. GitHub Usage: Proper commits and repository structure. (15%)
 5. Presentation/Demo: Clear explanation of work and project deployment. (15%)
-

Tools and Resources:

- **Code Editors:** VS Code, Sublime Text, etc.
 - **Version Control:** Git and GitHub
 - **CSS Frameworks:** Bootstrap or Tailwind CSS
 - **Deployment Platforms:** GitHub Pages, Netlify, Vercel
 - **Design References:** Figma, Canva, or Dribbble for UI inspiration
-

Deadline:

The task must be submitted within 10 days from the date of assignment.
